

HYPERFLEX-P25

Produced by Modern Waterproofing Company, **HYPERFLEX-P25** is a line of polymer modified bitumen waterproofing membrane of the highest quality. HYPERFLEX-P25 is modified by SBS, this guaranteeing high flexibility under very low temperature.

HYPERFLEX-P25 is reinforced with composite polyester (P) of non-woven polyester armoured with glass fiber filaments which provides highly mechanical properties and dimensional stability.

USES

- Single layer roofing system subject to low temperature.
- Foundations and underground structures subject to movements.
- Retaining walls.
- Waterproofing of toilets with area inside buildings.
- The product is suitable for use in bridges, highways, and tunnels.
- **HYPERFLEX-P25** with mineral slated finish is recommended for exposed roofing system (unprotected) for non-accessible roofs or roofs subject to low traffic conditions.

ADVANTAGES

- Easy to apply (by torch).
- High mechanical properties.
- Absolute impermeability to water.
- High elasticity at sever low temperature up to -25° C.
- Resistant to chemicals attack probable to be existing in soil.
- Excellent high temperature performance.
- Excellent adhesion on any surface.
- High dimensional stability.
- Environmentally friendly.
